100%

Faster cancer treatment

The target is 85 percent of patients receive their first cancer treatment (or other management) within 62 days of being referred with a high suspicion of cancer and a need to be seen within two weeks by July 2016, increasing to 90 percent by June 2017. Results cover those patients who received their first cancer treatment between October 2014 and March 2015.

Increased Immunisation

The national immunisation target is 95 percent of eight-month-olds have their primary course of immunisation at six weeks, three months and five months on time. This quarterly progress result includes children who turned eight-months between January and March 2015 and who were fully immunised at that stage.
